Senior Product Leader | AI Workflow Automation | Digital Health Platforms | Clinical Operations

Senior product and transformation leader with 10+ years across healthcare technology, interoperability, AI-assisted workflow automation, and regulated enterprise platforms. Experienced owning product strategy from vision through measurable value, translating complex clinical and operational workflows into scalable requirements, roadmaps, and adoption plans. Known for partnering with executives, engineering, data, operations, and compliance teams to reduce manual work, improve decision throughput, and build systems that fit how frontline users actually work.

-
- Impacts**
- Defined and scaled AI-assisted workflow systems across 25+ enterprise applications, reducing manual processing 40-60% and increasing decision throughput.
 - Led modernization across prior authorization, care management, claims, eligibility/member operations, provider experience, and clinical workflow environments.
 - Owned \$12M-\$20M+ transformation portfolios from diagnosis and roadmap through design, delivery, adoption, and value realization.
 - Translated fragmented operational processes and regulatory constraints into product requirements, decision flows, automation layers, and reporting capabilities.
 - Improved end-user productivity 15-25% while stabilizing dependencies across product, engineering, operations, finance, and compliance teams.

2022 - now Cognizant, Senior Manager, AI & Analytics, Director-Level Delivery Lead | Enterprise Platforms, Automation & Systems Integration
Design and lead enterprise business systems, automation, and platform integration across large, regulated organizations, owning outcomes across complex, multi-system environments supporting revenue operations, service delivery, and compliance.

- Lead AI-enabled transformation engagements from discovery and roadmap through design, delivery, and value realization, serving as the senior link among client executives, product, engineering, operations, and compliance.
- Define and scale AI-assisted workflow systems across 25+ enterprise applications, reducing manual processing 40-60% and improving decision throughput in complex operational environments.
- Own system-level product outcomes across \$12M-\$20M+ portfolios spanning CRM, workflow orchestration, reporting, data integrity, compliance, claims, and care operations capabilities.
- Translate regulatory constraints, fragmented workflows, and operational pain points into scalable product roadmaps, workflow automation, and decision-support requirements.
- Identify and remove systemic bottlenecks across mission-critical workflows, improving end-user productivity 15-25% while stabilizing cross-team dependencies.
- Drive alignment across executive stakeholders and cross-functional teams to balance near-term operational needs with scalable architecture and adoption goals.

Gold Card Prior Authorization Modernization Program (2024 Budget: \$12M; 2025-2026 Budget: \$7.0M)

- Design and scale AI-assisted workflow automation across payer and provider networks, cutting manual review effort 40-60% and contributing to \$200M+ in annualized operational value through faster decisions, higher throughput, and reduced rework.
- Translate fragmented prior authorization processes into scalable product roadmaps, automation layers, and decision flows that improve accuracy, data integrity, and adoption.

Optum Care Management Modernization (Program Est. \$20M)

- Guided platform strategy for modernization of legacy care and adjudication workflows supporting future-state billing, claims, and cost-containment initiatives.
- Coordinated transformation across approximately 24 critical enterprise applications spanning Provider Experience, Claims Adjudication / Cope Operations, Clinical workflows, and Eligibility / Member Operations.
- De-risked critical program dependencies across engineering and operations amid shifting requirements.

2020 - 2022 ELLKAY, Product Manager, Interoperability | Digital Health SaaS | Data Platform Strategy

Owned product strategy in close partnership with executive leadership, delivering interoperability platforms that enabled scalable FHIR/HL7 data exchange across complex healthcare ecosystems.

- Owned product strategy for interoperability solutions that ultimately supported exchange across dozens of hospital systems and provider organizations.
- Led FHIR/HL7 interoperability initiatives, enabling faster, cleaner data exchange between payers, providers, and third-party health platforms.
- Conducted competitive analysis and product discovery, improving usability and positioning of ELLKAY's interoperability framework.
- Directed integrations for early prospects, including HealthFirst, shaping platform capabilities that were later absorbed into broader product lines.
- Improved integration timelines by 20–30% through refined API models and streamlined onboarding workflows.

2017 - 2022 **TKO SOLUTIONS, Product Manager,** *Digital Health SaaS | GTM Strategy | Pricing | Client Delivery*

Operated autonomously with executive stakeholders to define pricing, packaging, and go-to-market strategy for healthcare SaaS concepts

- Developed pricing, packaging, and go-to-market strategies for healthcare SaaS concepts targeting payers, digital health startups, and provider groups.
- Built financial models and business cases driving investment decisions for new digital health offerings.
- Delivered client-facing product work for Vivante Health and other early adopters, influencing product maturity and workflow design.

2016 - 2017 **FOLIODYNAMIX, Product Owner,** *SaaS Platforms | Financial Services*

Operated with product and client leadership to deliver SaaS platforms supporting end-to-end lifecycle management for investment advisors in highly regulated environments.

- Oversaw training and implementation teams, ensuring seamless onboarding and successful go-live.
- Spearheaded the design and implementation of SaaS-based solutions for financial and healthcare clients, ensuring alignment with user needs.

2012 - 2015 **SAPIENT, Project Manager,** *Digital Platforms | Analytics | Insurance & Financial Services*

Led digital delivery initiatives in partnership with senior client stakeholders, aligning analytics-driven and automation-enabled solutions with business and compliance requirements for insurance and financial services clients.

- Provided key insights to senior leaders, ensuring projects aligned with business objectives and compliance requirements.
- Led product strategy for insurance companies, aligning predictive analytics and automation with financial services and underwriting

Education **MONTCLAIR STATE UNIVERSITY, Management Information Systems & Quantitative Methods** **Montclair, NJ**
